

Selenium Quiz

Multiple Choice

1. What is the purpose of the DriverPage.cs class in Selenium automation?
 - A) To define test cases.
 - B) To manage WebDriver instances and browser configuration.
 - C) To handle exceptions in Selenium scripts.
 - D) To write page-specific methods.
2. Which of the following wait types is a fictional term, added for clarity in Selenium training?
 - A) Implicit wait
 - B) Explicit wait
 - C) Fake wait
 - D) Fluent wait
3. Why is the Page Object Model (POM) important in Selenium?
 - A) It speeds up script execution.
 - B) It simplifies WebDriver installation.
 - C) It improves code maintainability and reusability.
 - D) It allows running tests in parallel.
4. When first installing Selenium for C#, what do you need to use?
 - A) Command Prompt to install drivers manually.
 - B) NuGet Package Manager to install required libraries.
 - C) An IDE pre-configured with Selenium.
 - D) A Selenium installer from the Selenium website.

5. Which components should you install when setting up a Selenium project?

- A) Selenium WebDriver, ChromeDriver, and WaitHelpers.
- B) Selenium IDE and FirefoxDriver.
- C) A custom automation framework.
- D) Just Selenium WebDriver.

6. Why do we need the Base Page in Selenium projects?

- A) To duplicate methods across all page classes.
- B) To centralize reusable methods and act as a parent class for other pages.
- C) To handle exceptions in test scripts.
- D) To store test data for all tests.

7. What is the purpose of the src/pages/tests/utilities folder structure?

- A) To store all project files together.
- B) To create a clear separation of responsibilities within the project.
- C) To allow multiple developers to access the same project easily.
- D) To minimize the number of files in the project.

8. When launching Chrome with Selenium, what does the `AddArgument("--incognito")` command do?

- A) It starts Chrome in fullscreen mode.
- B) It launches Chrome with developer tools enabled.
- C) It opens Chrome in incognito mode with no stored browsing data.
- D) It disables Chrome extensions.

9. What does inheritance mean in the context of the Base Page?

- A) The Base Page inherits methods from its child classes.

B) The Base Page is a parent class, and all page classes (child classes) inherit its reusable methods.

C) The Base Page is an interface for test execution.

D) The Base Page only contains abstract methods.

10. What does the "Elements" tab in the Chrome Developer Tools reveal?

A) The browser's console logs and errors.

B) The network requests made by the page.

C) The structure and details of the web page's HTML and CSS, used for finding element locators.

D) The settings and extensions installed in Chrome.

11. What does a Page Class represent in Selenium projects?

A) The structure of the entire application.

B) The test cases being executed.

C) The specific page being tested, with methods and locators for interacting with it.

D) A collection of reusable utilities for the project.

True/False

12. The void keyword in a method means the method does not return any value, while methods with a return type like int or string must return a value.

True / False

13. The Base Page is the only place where WebDriver should be initialized in Selenium projects.

True / False

14. The Chrome Developer Tools can only be opened using a keyboard shortcut.

True / False
